August 2024

# MONTHLY FUND PERFORMANCE UPDATE A-DANA STRATEGIC EQUITY

#### **Investment Objective**

The Fund aims to maximize medium to long term capital growth through investments in a diversified portfolio of Shariah-compliant securities listed on local and foreign bourses. The Fund is suitable for investors that are willing to take higher investment risk in return for potential higher returns by diversifying their investments into Shariah-compliant foreign equities.

Notice: Please refer to the Fund Fact Sheet for more information about the fund.

Notice: Past performance of the Fund is not an indication of its future performance.

#### Market Review

The FTSE Bursa Malaysia EMAS Shariah ("Index") fell 3.73% Month-on-Month ("MoM") to close at 12,286.67 pts. The Index outperformed the MSCI Asia ex Japan Index, which declined by 4.30% MoM in Malaysian Ringgit ('MYR') terms over the same period. Foreign investors were net buyers for the second straight month in August 2024, with a net buy of MYR2.55 billion, raising Year-to-date ("YTD") net buy to MYR3.1 billion. Bursa Malaysia's average daily transaction value ("ADTV") rose 7.6% MoM to MYR3.7 billion in August 2024. During the month, Petronas Dagangan (+18.8%), MBM Resources (+12.8%) and Maxis (+9.4%) were the key gainers while key detractors were Notion Vtec (-55.8%), SP Setia (-31.3%) and IJM (-18.0%). Sector wise, Plantation (+2.7%), Utilities (+2.7%) and Finance (+1.7%) were key performers, while Technology (-16.3%), Property (-13.8%) and Construction (-10.3%) were the key detractors. Major news during the month included Malaysia's six main governmentlinked investment companies pledged a combined MYR120 billion in direct domestic investments over the next five years under a program led by the Finance Ministry, the agreement for the Johor-Singapore Special Economic Zone ("SEZ") is now expected to be finalized by the end of this year from the original September deadline, and Bank Negara Malaysia reported that the country's economy grew by 5.9% Year-on Year ("YoY") in 2Q24, up from a 4.2% YoY expansion in 1Q24

The Dow Jones Islamic Market Titans 100 Index ("Index") rose 2.01% MoM to close at 9,633.08 pts on 30 August 2024. The Index outperformed the MSCI World which closed +2.51% and S&P 500 index which closed +2.28% over the same period. The United States ("US") equity market closed higher in August 2024 despite heightened volatility. The unwinding of Japanese Yen ("JPY") carries trade and US recession fears rattled investors in early August 2024. However, the US equity market rebounded and recovered the losses post Bank of Japan ("BoJ")'s commentary to maintain interest rate and the Fed pivot at the Jackson Hole address. MSCI Asia ex Japan rose 1.75% MoM in United States Dollar terms in August 2024. The Philippines, Indonesia and Malaysia were the best-performing markets while South Korea, India and China were the worst-performing markets in the index. ASEAN market rallied as expectations of a US interest rate cut grow. South Korea was the only market to end the month in negative territory as foreigners sold off technology stocks on concerns about Al peakout. Shares in Taiwan achieved modest gains but remains the best-performing index market in the year-to-date period. China market was lackluster as July activity data generally came in on the weak side. Indian market underperformed the index on mixed macro data.

## Market Outlook

We are cautiously optimistic of the equity market in the near term. Volatility likely a recurring theme in the near term given the uncertainty over macro conditions. geopolitics, and investors' positioning. Investors are now watching the macro data closely to gauge the extend of the US economic slowdown, recession risks and the quantum of interest rate cut going forward. Over in Asia, rate cut cycle in a nonrecessionary environment is typically positive for equity markets and most currencies. In China, its outlook remains challenging structurally. However, China's policy easing is gaining momentum given more room for monetary easing, less restrictions on house ownership policy, and efforts to revitalize the capital market and stabilize foreign trade and investment. Domestically in Malaysia, we expect a brighter outlook given the lower political risk premium amidst a more stable unity government coupled with stronger corporate earnings upside arising from the implementation of the government's growth initiatives and a rising foreign direct investment. The execution of the already announced economic initiatives such as the National Energy Transformation Roadmap ("NETR"), Malaysia My Second Home ("MM2H"), Special Economic Zone ("SEZ"), National Semiconductor Strategy ("NSS"), infrastructure projects rollout and the much-anticipated petrol and diesel subsidies rationalization will be watched closely. Downside risks to the market could stem from a hard landing US recession, worsening geopolitical tension, weaker than expected China's economy and poor execution of domestic growth initiatives.
