Market Review

US equities pulled back in June 2026 following several months of strong gains, as higher Treasury yields weighed on investor sentiment. Interest rates moved higher amid continued resilience in US economic data and a more hawkish-than-expected tone from the US Federal Reserve ("Fed") Chair Kevin Warsh's first Federal Open Market Committee ("FOMC") meeting, prompting investors to reassess the outlook for monetary policy. Asian equities underperformed their global peers, with the MSCI Asia ex Japan index declining 1.5% in US dollar ("USD") terms due to profit taking. Heightened volatility hit South Korea, previously one of Asia's top performers, driven by a wave of forced liquidations in highly leveraged ETFs. Despite these technical setbacks, both Taiwan and South Korea continued to benefit from robust demand for advanced semiconductors and Artificial Intelligence ("AI")-related server infrastructure. In contrast, China and Hong Kong equities weakened amid softer-than-expected macroeconomic data and continued underperformance among offshore internet stocks. Elsewhere, ASEAN markets delivered mixed results. Singapore outperformed on the back of resilient financials and industrials, while Malaysia and Indonesia were weighed down by foreign outflows. Indian equities were range-bound, as investors balanced strong structural growth prospects against elevated valuations.

Market Outlook

The Strait of Hormuz has reopened following a Memorandum of Understanding ("MoU") signed on 17 June 2026, which made the reopening a core condition of the accord. Energy prices have eased from their recent highs, and the Underlying Fund Manager view the earlier supply shock as transitory in nature. The geopolitical situation remains fluid, and the agreement's durability is still very much untested with renewed strikes and Iranian retaliation were already reported in late June 2026. If the peace process stalls or implementation falls short, the risk of renewed supply disruption and another leg up in energy prices is real. The Fed maintained rates in June 2026, but its updated projections send the stronger signal, pointing to a higher-for-longer regime that keeps the USD firm and Emerging Markets ("EM") currencies under pressure for now.

Overall, we stay positive on equities, with a base case of no recession and no excessive rate hikes. Inflation should also ease as oil prices reverse. This view is supported by continued earnings upgrades, particularly in the technology sector, underpinned by fundamentally driven AI-related demand. Hyperscalers' capex spending remains disciplined rather than overleveraged, and AI monetization continues to show a positive trend. Turning to Malaysia, our view stays constructive. As a net exporter of oil and gas, the country is comparatively well insulated from a higher oil price environment, and domestic inflation remains manageable. Malaysia is during a multi-year investment upcycle, underpinned by record Foreign Direct Investment ("FDI") momentum driven by China Plus One and the broader AI boom, benefiting semiconductors, industrial property, renewable energy, utilities, and construction. Growth is further supported by several pillars of growth such as the Johor Singapore Special Economic Zone, the National Energy Transition Roadmap and a healthy pipeline of infrastructure projects. Key risks to monitor include a collapse of the ceasefire that reignites oil prices, any pullback in AI-related capex from global hyperscalers, and delays to domestic initiatives. The Underlying Fund Manager remain committed to a proactive and disciplined approach to portfolio construction as conditions evolve.
